

# Route My Deals

Finance client requested GPS aware app that helps utilize special credit card deals.

- 1) App scans user's location and creates a route / itinerary of deals. Itinerary is sorted so user can visit various destinations and loop back to their home (or current location). User has option to expand region and show deals that may be out of the way, but have greater savings.
- 2) Alternatively browse one-off listings closest to user, or sort by the most redeemed deals (trending).
- 3) Itinerary view (not shown) will show the map and your first destination. Function available to skip current destination and proceed to next listing. When destination is reached, app will automatically change directions to the next store.
